## The survivor rusty forest remastered

This app is only available in the App Store for iPhone and iPad. Welcome to the world of The Survivor, hit by unknown virus that has wiped out most of the world's population. You are one of the few who have survived and now you must fight for your life against what is left of the indigenous population now infected with the disease. In the best traditions of survival and horror games, players in The Survivor must explore the open world to collect resources to build their own weapons, tools, fortifications, shelters, etc. The only goal in The Survivor is to survive. To do this you need to overcome struggles such as hunger, thirst, cold and radiation.► Craft weapons and tools. Chop trees in the forest to build a camp, or start a fire to keep warm.► Don't starve! Kill animals for meat. Free-range food to prevent you from starving.► Build a small shelter or a large fortress. Lay traps and defenses to keep a secure perimeter.► Explore and build during the day. Defend your base at night. Key features:► Random world generation - 1 sq km chunk of post Soviet state randomized with abandoned villages, military bases, deep forests, roads, rivers, lakes, wilderness locations, and more...► Day and night - Realistic dynamic day and night cycle with sun and moon phases.► Create and destroy - The world structures and items can be destroyed or demolished for resources. Re-purpose collected materials to build custom structures and fortifications by hand, placing construction pieces in the world in real time.► Inventory - Carry all the items you need to survive in the intuitive inventory system developed to meet the needs of crafting and character customization.► Item crafting and degradation - In the apocalyptic world of The Survivor, resources are scarce and every useful bit should be used. With a constantly growing list of recipes, collect resources such as wood, stone and rust metal to make weapons and tools. If your tool wears out over time, you use your crafting skills to repair them. Items or equipment can be improved, converted into something else or solved using the new crafting mechanisms.► Animals - Go into the wilderness to hunt animals as soon as the abandoned buildings have already been looted.► Stealth system - Sneak past zombies and animals that can see, hear, and smell you► Ambient temperature - Build/hide shelter or campfire. Cold nights or long days will make a difference. Official page on Facebook: 17 Aug 2020 Version 1.2.7 Remastered version of the original game???? ๗๗๗???? ??? ๓???? ๑๓๓???? did not provide details about Apple's privacy practices and data processing. Cold nights or long days will make a difference. Official page on Facebook: August 17, 2020 Version 1.2.7 Remastered version of the original game This game is pretty impressive it's probably as close to day-z as I have been able to find for the apple store I love just about everything about it what I would change is it would sometimes crash out of where and many times moving is laggy and stuff and I think you should add in a ghost town in the the where the player can run around and scavenge for things or maybe a dead city making these areas full of zombies and you should also add in vehicles like cars or bikes if adding a car would try too much a bike this game is great and has so much potential it's crazy oh and before I forget more guns I love the way you find or craft guns and bullets But a revolver is not good enough for a zombie apocalypse you atleast need a shotgun or a sniper or 1 other gun or maybe a now and arrow, but I really really like the crafting system and the zombies and the animals and the environment, but I expect bigger better updates in the future I can't wait I have this game after discovering it on the App Store. I thought it was the coolest. I decided to read the description before purchasing the app. It said it was compatible with my 4th generation iPod touch (which is up to date with its updates). I downloaded this app and waited patiently. Finally it was done and I was ready to play. I opened the app and checked what I needed to know. I then looked to see what the settings were on. Not wanting to mess with the game, I left it the same. I was going to start a game. It was loading. A game I spent my hard-earned money on really worked. Until it doesn't. The app crashed. New app. Let's try again. Again it crashed. Then again. Over and over again. Every time I try to start a game, the same thing happens. I should have known. Why would an app I paid for work? What was I thinking? Haha, silly me. So why would an app that doesn't work get two stars?? It did open. I just wasn't allowed to start a game. That shows me that there may be potential. Uh, probably not, but let's hope for the future :D. Please fix this so my money is not wasted on instructions to a game I can't play anyway! Thank you for your attention. Hopefully it's obvious that this is a rust clone. So I'm basing my comparisons on that. I wish it had multiplayer like in rust, but at least for now we are stuck with singleplayer. The graphics are pretty good for a mobile game and the lighting effects are great (The lens flares are nice!) and the world is decently large. But the day drags on. I'm guessing the day lasts 20 minutes and so does the night. It's also very easy. I wish there were trouble settings because I found myself getting a little bored how easy it was. The fight is not the main focus, but if you have something other than the rock that you start with and hold the attack button then the enemy can't hit you, no matter what. I haven't gotten a gun yet, so I can't say anything about gunplay. Overall though it's a pretty awesome game and you should get it while it's \$0.99RE. I have since used the gun and are underpowered as possible and I can only see it as a way to get players away if you add multiplayer. Also, I wish you would add something with more range like a bolt action rifle. The developer, Evgeniy Ershov, did not provide details about his privacy practices and data to Apple.
